

BCM Decathlon Moderate Fund

A Shares: DECMX | I Shares: DECIX | Inception Date: 4/19/2021 | Data as of: 9/30/2021

Strategy Objective, Expectations, and Process:

- BCM Decathlon Moderate is a global, multi-asset allocation Fund that seeks to provide capital appreciation and income while limiting volatility to a target range of between 7% and 12%.
- Philosophically, we believe that while investment returns and global markets are unpredictable, investors' reactions to market events remain consistent. BCM Decathlon uses pattern recognition technology (PRT), driven by machine learning, which seeks to identify and capitalize on these patterns in investor behavior.
- The investment universe consists of ~130 long-only ETFs representing virtually every investable asset class, including most major sub-asset classes, industries and most geographies. The Fund is unconstrained and seeks non-correlated returns and opportunistic growth opportunities wherever they are present.
- In addition to being a standalone option for smaller accounts, the Fund is designed to be a risk-conscious alpha engine for strategic asset allocation portfolios seeking consistent risk-adjusted returns and helping smooth the investment experience.

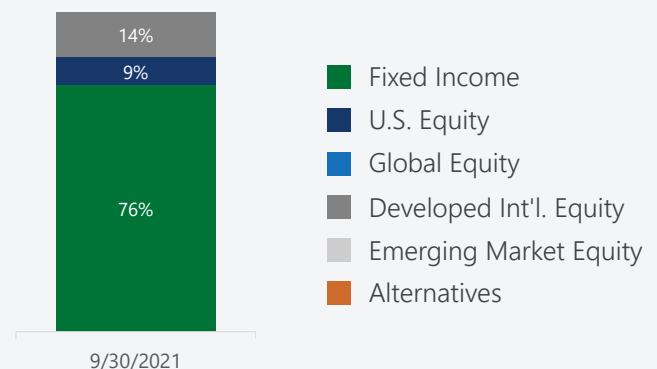

BCM's Flagship SMA Strategy has a nine year track record of investing opportunistically and providing alpha to investors throughout market cycles.

The BCM Decathlon Moderate Fund **offers the same philosophy and is driven by the same research** as the Decathlon Moderate SMA strategies that have over \$1.3B of AUM/AUA as of 9/30/2021.

Performance data quoted represents past performance. Past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. To obtain performance current to the most recent month end, please call 833-786-1121 or access online at investBCM.com.

The Dow Jones Moderately Conservative Portfolio Index is a member of the Dow Jones Relative Risk Index Series and is designed to measure a total portfolio of stocks, bonds, and cash, allocated to represent an investor's desired risk profile. The Dow Jones Moderately Conservative Portfolio Index risk level is set to 40% of the Dow Jones Global Stock CMAC Index's downside risk (past 36 months). The Dow Jones Global Stock CMAC Index is designed to measure a portfolio of stocks. The MSCI All-Country World Index captures large and mid-cap representation across 23 Developed Markets (DM) and 26 Emerging Markets (EM) countries, covering approximately 85% of the global investable equity opportunity set. Indices are not managed and do not incur fees or expenses. The Bloomberg Barclay's U.S. Aggregate Bond Index, is a broad-based flagship benchmark that measures the investment grade, US dollar-denominated, fixed-rate taxable bond market. The index includes Treasuries, government-related and corporate securities, MBS (agency fixed-rate and hybrid ARM pass-throughs), ABS, and CMBS (agency and non-agency). Indices are not managed and do not incur fees or expenses.

Investors may not invest in an index directly; unlike the Fund's returns, an index does not reflect any fees or expenses.

About Beaumont Capital Management (BCM)

Beaumont Capital Management (BCM) is an asset manager that provides solutions focused on improving investors' experiences and outcomes. Using quantitative research and rules-based processes, we seek to remove emotion from the investment process. Our strategies seek to provide non-correlated returns and in addition to our standalone solutions, could serve as an alpha engine to a strategic asset allocation portfolio while still focusing on downside risk management. Our strategies are offered in various vehicle types to financial advisors and institutions and include core, constrained strategies; multi-asset, unconstrained portfolios; and all-in-one, asset allocation models. Additionally, we have a suite of proprietary quantitative tools and machine learning capabilities that can be employed to develop custom solutions for RIAs and institutional investors.

As with all investments, there are associated inherent risks including loss of principal. Stock markets, especially foreign markets, are volatile and can decline significantly in response to adverse issuer, political, regulatory, market, or economic developments. Sector investments concentrate in a particular industry and the investments' performance could depend heavily on the performance of that industry and be more volatile than the performance of less concentrated investment options. Foreign securities are subject to interest rate, currency exchange rate, economic, and political risks, all of which are magnified in emerging markets. The risks are particularly significant for ETFs that focus on a single country or region. Fixed Income investments are subject to inflationary, credit, market and interest rate risks.

Exchange Traded Funds (ETFs), trade like stocks and are subject to investment volatility and the potential for loss. ETFs are securities that track an index, a commodity or a basket of assets like an index fund, but trade like a stock on an exchange. ETFs experience price changes throughout the day as they are bought and sold. The BCM investment strategies may not be appropriate for everyone. The portfolio manager maintains full discretion for the strategy.

The asset allocation shown reflects the weight of the allocations at time of purchase. Actual allocations will differ due to market fluctuations. Cash levels are estimated to be ~2% even when the fund is fully invested and can be allocated to a money market or short duration (up to a 1-3 year) bond ETF.

Date of first use 3/31/2021
